

## EXPERTS FOR MASTER DATA MANAGEMENT SOLUTIONS

---

InterComponentWare (ICW) is a leading, internationally operating supplier of software for the healthcare IT market. We improve the IT-based collaboration among healthcare professionals and their patients, as well as the secure exchange and processing of healthcare data across enterprises. Our clients operate successfully in many international markets and benefit from our expertise in implementing innovative trends and addressing current and future challenges in healthcare.

A great example of how we work with our valued clients, and how they benefit from our software solutions, is our partnership with OneHealthPort (OHP).

# OneHealthPort

[WWW.ONEHEALTHPORT.COM](http://WWW.ONEHEALTHPORT.COM)

OHP has been engaged by a major public purchaser partnered with five health plans to stand up a Clinical Data Repository in order to create a longitudinal patient record that blends claims, eligibility and clinical data extracted from provider electronic health records. To accomplish this ambitious task they needed a technology partner that could offer a **MASTER PATIENT INDEX** and **COMMUNITY HEALTH RECORD**.

*"We looked at different offerings and ultimately selected ICW. What impressed us about the ICW solution was their tight adherence to standards, the operational efficiency of the platform and how cost effective it was. It is exciting to us and our health plan partners to see the opportunities standards offer to reduce the cost and complexity of health information exchange. For the first time, rich clinical information can be made available to the full care team, care managers and others, to improve member outcomes and simplify administration. We are very pleased to be working with ICW in this groundbreaking effort."*

**Rick Rubin, CEO, OneHealthPort**

**Our work with OHP is an excellent reference to the key benefits our Master Data Management (MDM) software solution provides to Payers and any organization exchanging health information:**

- Building a longitudinal patient record
- Message broker for real-time matching of clinical data
- Unification of member information at health insurance companies
- Enhancement of master data quality
- Supporting the cross-enterprise exchange of clinical summaries, orders and results between care providers

**Benefits of accurate member tracking FOR PAYERS:**

- Track members over time and across employers
- Eliminate duplicate member records
- Cost savings of up to two-thirds of your current in-house cost to monitor and resolve problem records and improve membership administration
- Connect members across multiple systems and provide a complete, consistent and single view
- Reduce the exchange of paper and fax attachments
- Improve member-centric services
- Improve population health management capabilities
- Facilitates privacy and compliance objectives
